Using the IPSec Avaya VPN Client
The Avaya VPN Client will create a secure IPSec VPN connection to the network and enable direct application level access to corporate network resources. Using this client will enable direct access to RDP sessions on the corporate LAN as well as direct access to intranet sites and network shares.

Creating your Custom VPN Connection Profile
The following information details the steps required to create a local connection profile that will store connection parameters to the I&E Systems Pty Ltd Connect VPN. You may further customise this profile to suit your specific requirements.

1. Open the Avaya VPN Client installed on your local computer.
   Note: If you have not installed the client please download it and install it from the following locations.

2. Click on the Profile Wizard link to start creating your custom VPN connection profile.

3. Enter a Profile Name of your choice and optional description. For example, IES Connect VPN and click Next.
4. Select the SSL Tunnel radio button and click Next.

5. Enter `connect.iesystems.com.au` in the Destination host name field and ensure 443 is entered in the Port field then click Next.
6. Select the **Use predefined Login Service to authenticate** option and click **Next**.

7. Select **Use default browser’s proxy setting** and click **Next**.
8. Leave the **Login Services** option as the **default** value and click **Next**.

9. Enter your domain username into the **Enter your User Name** field and click **Next**.
10. Leave the **No, I do not want to dialup first** option selected and click **Next**.

11. If you would like to launch an application after establishing your VPN connection then select the **Yes, I want to launch**... option and enter the path to the application in the **Application** field below the **After Tunnel is established** section. If you do not wish to launch an application after establishing your connection simply select the **No, I do not want to launch applications** option and click **Next**.

   **Note:** Automatically launching applications can be added after you have completed the Profile Wizard setup.
12. Leave the default **I will not define a failover profile** option selected and click **Next**.

13. Click **Finish** to complete the Custom Profile Wizard.
14. The Avaya VPN Client connection window will now open. Enter your domain password into the **Password** field and click **Connect**.
